Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (available by anonymous ftp from arthur.epu.orl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://ww.cbs.dtu.dk/netpgene/Dsnetpgene.html), searches of the complete sequence against a peptide database and the Arabidopsis and Rice EST databases at TIGR, and the maize EST database at thtp://www.tigr.org/tdb/dst/ar.html). Annotated genes Genbank.(http://www.tigr.org/tdb/dst/ar.html). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database htts. Genes without significant peptide similarity but with EST similarity, that are predicted by more than two gene with similarity are named as 'unknown' proteins. Genes without proteins over most of their length are annotated as thypothetical' proteins. Genes encoding tRNAs are predicted by thomber between that two gene challed the protein sequence that are needing tRNAs are predicted by simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RW/RepeatMasker.html). Regions of exons by GRAIL are annotated as misc features.

                                                                       The present sequence represents DNA encoding a novel spinach ribose-5-phosphate isomerase. The invention relates to a protein with ribose-5-phosphate isomerase activity, comprising at least 100 residues of a 289 residue spinach manno sequence, preferably residues 50-239. Novel phosphate isomerase inhibitors can be identified by incubating potential inhibitors with the enzyme and determining the ribose-5-phosphate isomerase activity. These inhibitors can be used as herbicidal agents.
                                                                                                                                                                                                                                                                                                                195 tacaaggeegtegagtaegtggagteeggeatggteeteggeetaggeaeeggeteeaee 254

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a chimeric gene, encoding the 5' portion of the GAL4 DNA-binding domain and encoding in the 3' portion the transcriptional activation domain from HSV WP16. The A/T content of the GAL4 nuclectide sequence in this gene is less than 40% (contrasting with 59% in yeast). Reducing the A/T content optimises expression in plants. Constructs containing the A/T content optimises expression in plants. Constructs containing this nucleic acid can be used to express genes in a known pattern (temporal or spatial) in a plant, and to co-ordinate expression of several genes and, as traps, to isolate plant enhancer sequences. Particular applications are in studies of metabolic pathways and to modulate synthesis of e.g. dyes or lipids. Constructs containing sequences encoding the altered GAL4 DNA binding domain may include a reporter gene linked to a GAL4 responsive upstream activating sequence, particularly one encoding glucuronidase or green fluorescent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; METH1; METH2; anti-anglogenic; metalloprotease thrombospondin; cancer; diagnosis; hyperproliferative disorder; autoimmune disease; anglogenesis inhibitor; abnormal wound healing; inflammation; rheumatoid arthritis; psoriasis; endometrial bleeding disorder; diabetic retinopathy; macula degeneration; haemangioma; detection; arterial-venous malformation; immune deficiency; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120 atggacgccggcctcctccaccctcctcccctccgtcatcctcacccaagacgattg 179

```

```
The invention relates to novel vaccines that induce a protective immune response against botulinum neurocoxin (BONY) serotypes A, B, C, D, E, F and G (BONYA-BONYG). The vaccine of the invention is novel recombinant from G (BONYA-BONYG). The vaccine of the invention is novel recombinant fragment comprising a vector, and at least one nucleic acid fragment comprising a vector, and at least one nucleic acid fragment comprising a C-terminal heavy chain fragment (Ho) from BONY venctor selectives A-G. In preferred embodiments of the invention, the vector is a vector results in the production of large amounts of a protein encoded by vector results in the production of large amounts of a protein encoded by vaccines against botulism. The constructs are used to produce tools for the diagnosis of botulism. The transformed host cells can be used a manifest the effectiveness of drugs and agents which inhibit toxin effects. The vaccine currently used against botulism is dangerous of and expensive to produce, and contains formalin, which is very painful the recipient. Also, the vaccine is incomplete, in that only 5 of the the recipient. Also, the vaccine is incomplete, in that only 5 of the recipients. Botulism is easily purified, and available in large quantities. It is also expressed in the lymph nodes for a better immune response. Sequences 287212-287217 represent synthetic DNA very expensive to recombinate of the present invention. These very sequences encoding BONT He fragments used in the present invention. These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1371 BP; 397 A; 416 C; 265 G; 293 T; 0 other;

The antigenic proteins, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The snaB gene product is involved in the biosynthesis of streptogramins, antiblotics active against Gram-positive bacteria. The identification of the sequences encoding the enzymes involved in the biosynthetic pathway means that they can be isolated and manipulated. Mutant microorganisms in which a step in the streptogramin biosynthetic pathway is blocked can be cultured to produce streptogramin intermediates, which may later be converted to streptogramin derivatives. Recombinant cells may also be used for the bioconversion of streptogramins from one form to another or for the production of hybrid antibiotics.

```

```
This sequence encodes an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               508 egecgecaacgaegecgecgaecaegecggtgaecaegecaacgaecgtegececga 567

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This DNA sequence codes for an antigenic portion (see W64359) of Mycobacterium tuberculosis antigen TbH-29. It was isolated from a M. tuberculosis strain H37kv genomic library. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see W64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or the contact of the diagnosis of the contact of the diagnosis of the contact of the diagnosis of the contact of the diagnosis of the contact of the diagnosis of the contact of the diagnosis of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the co

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T. B or natural killer cells and/or macrophages in tuberculosis immune subjects. 219249 to 219460 and v39083 to v39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    92 coatttoatcgccaccgagaaagccgccatggacgccggcctcctccaccctcctccc 151

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibiotic; streptogramin; snaA; snaB; snaC; biosynthesis; enzyme;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      102 gecaecgagaaageegecatggaegeegeeteeteeaeeeeteeteeteegteate 161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence comprises the snah, snaB and snac genes which are involved in the biosynthesis of streptogramins, antibiotics active against Gram-positive bacteria. The identification of the sequences encoding the enzymes involved in the biosynthetic pathway means that they can be isolated and manipulated. Mutant microorganisms in which a step in the streptogramin biosynthetic pathway is blocked can be cultured to produce streptogramin intermediates, which may later be converted to streptogramin derivatives. Recombinant cells may also be used for the bioconversion of streptogramins from one form to another or for the production of hybrid antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antigen; immunogen; vaccine; tuberculosis; non specific adjuvant;

The present sequence encodes a specifically claimed M.tuberculosis antigen, TDM-7. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence encodes a specifically claimed M.tuberculosis antigen, TBM-7. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          89 occocatticatogocacogagaaagoogocatggacgooggootootocacootooto 148

This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        209 gtacgtggagtccggcatggtcctcggcctaggcaccggctccaccgccaagcatgccgt 268

OTHER INFORMATION: bp 12 to 1910 comprises
OTHER INFORMATION: S. lividans DNA sequence, including Protease X.
OTHER INFORMATION: bp 1 to 11 represents cloning vector DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            115 cogccatggacgccggcctcctccaccctccccccccgtcatcctcacccaagacg 174

With Phytophthora medicaginis.

/dev_stage="roots harvested at 10 days post inoculation with Phytophthora medicaginis."

/lab_host="E. coli strain Solis."

/note="Vector: pluescript SK +/-: Site_1: EcoRI; Site_2: XhoI; cDNA was prepared from polyA+ enriched RNA from roots harvested at 10 days post inoculation with Phytophthora medicaginis. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using digapack III Gold packaging extracts.

Plasmids containing CDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in SOLR cells. Note: EST may be of fungal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /lab_host="E.coli strain Solk"
/note="Vector: pBluescript SK +/-; Site_1: EcoRI; Site_2:
xhoi; cDNA was prepared from polyA+ enriched RNA from
roots harvested at 10 days post inoculation with
Phytophthora medicaginis. The cDNA was directionally
ligated into the Uni-ZAP XR vector from Stratagene and
packaged using Gigapack III Gold packaging extracts.
Plasmids containing cDNA inserts were excised from the
recombinant lambda-ZAP phage using Ex-Assist helper phage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Another "Vector: palled script II XR; Site_1: ECORI; Site_2:
XhoI; This cDNA library was constructed from mRNA isolated
from the apical shoots of 9 to 10 day old etiolated
seedlings. The shoot tips including any emerged leaves
were harvested for mRNA isolation. The cDNA library was
prepared using the Stratagene pBluescribt II XR cDNA
library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoRI.XhoI restriction site of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown is soon as it is available and the accession number will be breserved.
